**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1, 3 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hasegawa et al. (US 6,207,774) alone or in view of Nakanaga et al. (JP 05-320248).

Hasegawa discloses an olefin polymerization catalyst comprising a metallocene compound represented by formula (1), an ionizing ionic compound and an organoaluminum compound (col. 2, lines 6-48). Hasegawa's Examples 10 and 11 bridging col. 8 and col. 9 disclose the copolymerization process of ethylene and hexene in the presence of diphenylmethylenecyclopentadienyl(2,7-dimethylfluorenyl) zirconium dichloride/diphenylmethylenecyclopentadienyl(2,7-di-*t*-butylfluorenyl)zirconium dichloride, triisobutylaluminum, N,N-dimethylanilinium tetrakis(pentafluorophenyl) borate. It is noted that in the metallocene complexes of Examples 10 and 11 the phenyl groups corresponding to R<sup>1</sup> and R<sup>2</sup> of formula (1) are not substituted aryl groups, however, Hasegawa expressly discloses that R<sup>1</sup> and R<sup>2</sup> group are selected from substituted aryl groups in line 28 of col. 2. Therefore, it would have been obvious to prepare a catalyst compositions similar to those of Examples 10 and

11 wherein at least one of the phenyl groups is replaced with a substituted aryl group in search for a metallocene catalyst with desired stereoselectivity.

It is also noted that Hasegawa does not express disclose an activator such as aluminoxane. However, borates and aluminoxane are well established functionally equivalent activators for activating metallocene complexes for olefin polymerizations. For example, Nakanaga teaches that both borate and aluminoxane are used as activators for metallocene complexes in paragraphs [0006], [0017]-[0020] and [0022]-[0026].

Therefore, it would have been obvious to a skilled artisan at the time the invention was made to employ Nakanaga's aluminoxane activator Hasegawa's catalyst composition to provide olefin polymers in order to optimize the catalyst activities and in the absence of any showing of criticality and unexpected results.

### ***Conclusion***

3. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
